TRUSTWORTHY RELATIONSHIPS SINCE 1976

IN MARANO SUL PANARO, THE BEATING HEART OF ITALY'S MOTOR VALLEY, PM S.p.A WAS ESTABLISHED IN 1976.

From a small owner-operated company specializing in mechanical machining operations using NC machines in outsourcing, the company soon began to set the standards in the field of large-scale metalworking and precision assembly, in a number of different sectors.

Accolades, major orders and partnerships were in fact not long in coming from major automotive companies and competitive motorcycle manufacturers.

The strong interest shown in this all-Italian company by leading European automotive manufacturers has represented a clear sign of the commitment and integrity of a team which, for decades, has been engaged not only in manufacturing, but above all in successfully solving problems tied to products and production.

Focus on new technologies and cutting-edge systems together with the careful control of all phases of the production process have earned the company renown in the industry both within Italy and in the rest of Europe. The number and increasing diversity of manufactured products has resulted in the company acquiring highly flexible plants, suitable for diversified production, from small and medium series to large-scale continuous-cycle outputs. The experience accumulated in relation to a broad range of products and, therefore, of production processes, has made it possible to effectively satisfy all types of orders.

The company is organized so as to provide a comprehensive and top-quality service, with specific departments offering, on a continuous basis, co-design, engineering, prototyping, metalworking, mass-production and final complex unit assembly.

A reactive mentality orientated towards both market and customer requirements, together with strong integrity and passion for the job, have enabled the group to successfully take on all assignments with a high degree of flexibility, without scrimping on quality.
